DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1-11, 26, 28 and 39-40 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11, 26, 28, and 39-40 are rejected under 35 U.S.C. 102(b) as being anticipated by Claeys et al. (4,853,521) as cited in Applicant's IDS. Claeys et al. discloses a method for verifying and administering drugs to a patient, wherein the first and second "coded sites" for a coded carrier (syringe) is determined by its arrangement (by order of use) on the tray (col. 2, lines 61- 63). The first and second "coded sites" do not have to be different "coded sites" because claim 39 claims them to be the same.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3738

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11, 26, 28, and 39-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Claeys et al. (4,853,521) as cited in Applicant's IDS, in view of University of Maryland (News Article 10). Claeys et al. discloses a method for verifying and administering drugs to a patient, wherein the first "coded site" for a coded carrier (syringe) is determined by its arrangement (by order of use) on the tray (col. 2, lines 61-63), however fails to disclose a second coded substance site. University of Maryland teaches syringes (carrier) must be placed intact in a puncture proof sharps container that is labeled (a second coded substance site) with the words "SHARPS" or "BIOHAZARD" which prevents unacceptable risks to staff. It would have been obvious to one of ordinary skill in the art to combine the teaching of a second coded substance site in the form of a puncture proof sharps container, as taught by University of Maryland, to a method for verifying and administering drugs to a patient as per Claeys et al., in order to prevent unacceptable risks to staff.
